AT-PRO2HDREC-DA Updating Guide

I. Requirements:
      1. AT-PRO2HDREC-DA w/ power supply
      2. Desktop PC or Laptop PC w/ RS-232 Port
      3. RS-232 cable (DB9 Female-to-Male, non-crossover type)
      4. Flash Magic software
      5. Latest firmware (downloadable from atlona.com)

II. Installation:
      1. Install "FlashMagic.exe" software
      2. Connect the AT-PRO2HDREC-DA and PC by using the DB9 female to male cable
            *Do **not** plug in the power supply of the PRO2HDREC-DA at this time

III. ISP Mode:
      1. Insert a small needle into the hole next to the power indicator
      2. Hold down the button with the needle while plugging the PRO2HDREC-DA's power supply in
      3. Release the button when the power indicator turns on

IV. Firmware Upgrade:
      1. Open "Flash Magic"
      2. Configure the Flash Magic settings (see picture below)
            a. Select the COM port
            b. Set the baud rate to 115200
            c. Set Device to LPC2387
            d. Set interface to "None (ISP)"
            e. Set Oscillator Freq (MHz) to 20
            f. Check "Verify after programming" & "Erase all Flash+Code Rd Port" (STEP2&4)
      3. Press "Browse" button to open the current firmware
      4. Press the "Start" button to update the product
           Once the product has been upgraded successfully, the product will reboot
