

Release Notes

Public Releases

Version 1.0.1

Features	<ul style="list-style-type: none">Added an option to disable the microphones on the camera so that they will not appear as an audio device on the user's PC. This is particularly useful if the camera is used with a speakerphone or other device that provides microphones.Auto-framing now remains enabled even if a 4K resolution is requested from the camera. The camera will not auto-frame the 4K image, but it will automatically return to auto-framing when a lower resolution is selected (if auto-framing is enabled).Renamed the AI Menu to FRAMING.
Bug Fixes	<ul style="list-style-type: none">Resolved an issue where the camera reported support for resolutions and codecs that exceeded USB 2.0 bandwidth.Resolved an issue where using the camera with the Windows Camera app results in auto-framing being disabled.
Known Issues	<ul style="list-style-type: none">None
