

## 4MM (BANANA) PLUG 100086

This 4mm (banana) plug offers a Rear Entry of the speaker wire. The Heavy-Duty 24k Gold plating will resist corrosion and will provide the best possible connection.

*Note: The rear entry can accommodate a 14~18 a.w.g. wire (lower # means thicker wire)*

### SIDE ENTRY IANSTALLATION:

1. Unscrew the outer sleeve of the banana plug and unscrew 2 outer bolts
2. Strip the speaker wire to the approximately 15mm (5/8in)
3. Twist the stripped part of the speaker wire a few times to keep all of the strands together and insert it into the plug. Once inserted, tie up the screws enough for the sleeve to clear them and for the wire to hold in place
4. Screw in the outer sleeve.
5. The plug is ready to use.
