ATLONA TECHNOLOGIES INTRODUCES NEW PROFESSIONAL 8X8 DVI MATRIX SWITCH, THE AT-DVI0808

Atlona Technologies, solutions based manufacturer of Audio Video products, releases new Professional 8x8 DVI Matrix Switcher, AT-DVI0808.

The AV market is beginning to see digital matrix switches with a greater number of inputs and outputs; however early DVI switcher adopters were limited to 4x4 and larger solutions were extremely expensive and very complicated to use. Atlona Technologies, a solution based manufacturer of AV connectivity products, has researched the project and built a new line of Professional DVI switchers based on the same technology that all the other Atlona's Pro switchers (such as RGB and VGA) were built on. Atlona is excited to announce four new matrix switches designed specifically to route DVI signals. The first of these products, the AT-DVI0808, is an 8x8 DVI matrix switch geared for video wall and small scale digital signage. This unit is also available with audio as well (model: AT-DVI0808-A).

This rack mountable digital matrix switch is designed to be controlled through RS-232 with the included software from any computer, or via third party control systems such as Crestron or AMX. The unit also features an Ethernet port, which allows control through a network as well. The DVI0808 showcases an EDID learning function that shortens switching speed considerably and maintains the digital "handshake" between source and display. With Atlona's DVI0808 users will never experience signal loss, degradation due to signal routing, or dropping picture on one source when switching video on another. Not only can this unit support High Resolutions up to 1920x1200, but the Atlona DVI Switchers are featured with re-clocking technology which allows a use of long cable runs on both the inputs and outputs.

With a low MSRP of \$3,999, the AT-DVI0808 provides the most flexible and cost effective solution in the market for users routing high definition from any 8 DVI sources to 8 High Definition DVI compatible displays simultaneously. This unit is perfect for broadcast rooms, multi council-chambers, television teaching rooms and command center application where multiple DVI monitors are required. Atlona builds each unit per order adding features such as Audio or additional TC/PIP support as needed.

Atlona's AT-DVI0808 DVI Matrix Switchers are currently available for order and ship within 2 weeks from time of purchase.
