## ATLONA RELEASES A NEW SERIES OF HD VIDEO FIBER OPTIC EXTENDERS AIMED AT PRO INSTALL, MEDICAL, AND GOVERNMENT MARKETS

Atlona's Fiber Optic Extenders Available in 3GSDI, DVI RGB/YPbPr, and HDMI extend high definition signal up to 1000ft securely, along with audio and RS232, over a single Optical Fiber cable

San Jose, CA — July 2, 2009 —Atlona Technologies releases a new line of video extenders that transfer High definition video over multi-mode Optical type fiber optic cable up to 1000ft without any signal loss. These new extenders serve as not only a way to for companies to send video signal far beyond the lengths of actual cables, but also provide a measure of security due to their use of Fiber Optic cable rather than CAT5. Since Fiber Optic cable is immune to interference caused by electromagnetic fields (EMF/EMI), these extenders are perfect for medical imaging applications where a perfect picture is not only ideal, but necessary.

Atlona's Baluns are available in multiple video formats including HDSDI, DVI, and HDMI, and can convert signal between these connection types on the receiving end. This new series of video baluns are quite versatile offering users the option of extending Audio and RS232 bi-directionally as well. HDMI and DVI versions are also available as an adaptor type balun, well suited for matrix switches and distribution amplifiers. "Using Fiber is the soundest solution for extending HD video" says Atlona Marketing Director Christopher Bundy.

Atlona's new line includes models AT-3GSDI20SR (3G HD/SDI), AT-DVIF20SR, AT-DVIF30SR (DVI), AT-HDF-20SR, and AT-HDF30SR(HDMI). They are expected to start shipping by July 7, 2009.

AT-3GSDI20SR

AT-DVIF20SR

AT-HDF20SR

AT-DVIF30SR
